

Instillation of Eye Drop and Ear Drops and Insertion of Suppositories

Aims and Objectives:

To have the health care worker administer eye drops, ear drops and suppositories in a safe, competent manner

Learning Outcomes:

Following this study day the health care worker will:

- Have an understanding of the relevant anatomy and physiology of the structures involved in this procedure
- Be aware of the range of drugs available, and the indications for use of the various preparations
- Know how to provide eye care should this be necessary prior to instillation of eye drops
- Have a knowledge of the general procedure for administering medication
- Be aware of the importance of record keeping in relation to administration of drugs

Target Group:

Health and Social Care workers involved in the administration of medication to service users

Duration:

One day
